

TRITECH
STRATUS
agent API

Providing your sales agents with the tool they need to accurately quote premiums. Stratus AGENT API is a web-based policy solution designed to accurately pinpoint Kentucky policy locations in real-time and assign premium tax rates at the point of sale.

KEY FEATURES

STANDARD API INTEGRATION

Point of Sale API service that integrates easily into your point of sale system.

ON DEMAND GEOCODING

On demand access to advanced mapping technology providing accurate premium quote capabilities by determining the tax jurisdiction in which an address is located based on policyholder address and geographic boundaries.

SINGLE ADDRESS LOOKUP

Look up the taxing information for a single address. Type in the situs of risk and Agent will geocode address.

BENEFITS

STATE COMPLIANCE

Stratus Agent API meets geocoding requirements for statutory compliance in insurance premium point of sale quote systems.

IMPROVED ACCURACY

The power of Agent's advanced mapping technology ensures policy allocation accuracy reducing complex risks and improving the quality of point of sale quotes for agents and policy holders.

MINIMIZED COST

Accurate and efficient point of sale geocoding reduces policy quoting errors and costly corrections increasing profitability margins.
