Choose one state or bundle them to fit what's right for your company.

## ALABAMA

Assigns risks to the correct municipality for taxation. For Fire and Marine and Other than Fire and Marine premiums.

## DELAWARE

For premiums on risks located within the City of Wilmington, New Castle County, Kent County, and Sussex County. Meets Bulletin No. 55 Regulations.

## FLORIDA

For premiums covering risks within Florida to the correct Firefighters' Pension and Police Officers' Retirement Trust Funds or city for taxation. Allocator utilizes data from the Florida Premium Tax Database.

## GEORGIA

For geocoding premiums covering risks within Georgia to the correct municipality for taxation. GID 17A License Fees.

## ILLINOIS

Geocodes premiums covering risks within Illinois to the correct municipality or fire district.

## KENTUCKY

Verified Software Vendor for a risk location system as defined by the Kentucky bill HB 524. Allocator utilizes the municipal boundary maps from Kentucky Commonwealth Office of Technology.

## LOUISIANA

For premiums covering risks within Louisiana to the correct municipality for taxation. All premiums in Louisiana are taxable. For cities & parishes.

## NEW YORK

Assigns the premiums to the Metropolitan Commuter Transportation Districts (MTA), or county for taxation. Assigns the risk for premiums within New York to the correct Fire Protection District. Utilizes data from the New York Street Listings for Fire Districts. Exports the tax amounts to a text file.

## NORTH DAKOTA

The North Dakota module allocates premiums to the correct city/town/fire districts listed on the SFN 52764 report.

## SOUTH CAROLINA

Geocodes premiums in South Carolina to the correct city/county. Supports second allocation for non-taxable premiums based on the agent address for MASC.

“Proper premium risk assignment at point of sale, batch processing or allocation by the record.”

## WHAT IS ALLOCATOR?

Premium Pro Allocator is designed to determine the accurate tax jurisdictions for insurance premiums. Utilizing advanced mapping technology, Allocator assigns premiums to the correct taxing jurisdiction based on policyholder address rather than zip code.

## GET ACCURATE RESULTS

How are policy risk location results affecting your business? How much tax is over/under paid to districts, counties and municipalities? How much tax is billed to customers outside of the proper jurisdiction?

Insurance companies face several key problems in keeping up with the assignment of policies to the correct taxing jurisdictions. The labor intensive process of manually reviewing customer data is widely subject to interpretation and can be filled with quality issues.

With ever-changing municipal boundaries, zip codes spanning multiple jurisdictions, and the yearly modifications made to tax rates and payee address information, manually assigning premium risks to the correct taxing jurisdiction can be a daunting task. Incorrect risk assignment may increase an insurance company's chances of being audited, generate penalties for non-compliance, or even create costly legal fees.

TriTech offers 3 solutions to address premium risk location concerns:

### Premium Allocator Software

Is designed to process all of your premium data in one batch, assigning each policy to the correct municipality, thus eliminating the tedious task of manual allocation. Once your premium data has been processed, PREMIUM Pro Allocator integrates seamlessly with our Premium Tax and Municipal Tax software packages to provide a complete solution from start to finish.

### Allocation By the Record

Offered through TriTech Services, Inc. is a cost-effective solution to assist companies that have smaller amounts of premium data and would therefore benefit by outsourcing the task of risk location assignment. By harnessing our extensive knowledge and experience in the field of premium tax, even the smallest company can afford professional quality service. We offer a 48-hour turnaround time or same day service for a small additional charge.

### Allocator Online - Kentucky

Offers a robust, scalable, and easy-to-integrate online solution that enables businesses to become location intelligent. This allows you to provide accurate premium risk location data with no interruption to the critical point of sale or policy/agent management system. PREMIUM Pro Allocator Agent is a web-based policy geocoding solution specifically designed to allow insurance companies to more accurately pinpoint policy locations in real-time, and to assign the correct premium tax rates to each policy at the point of sale. As a Microsoft.NET-based web service, PREMIUM Pro Allocator Agent can be quickly and easily integrated into your company's existing website or policy/agent management system.
